

Education

China University of Geosciences (Wuhan)

Bachelor degree in Information Security

GPA: 87.67/100;

GRE: V158 Q168 AW:3.5

WUHAN, CHINA

Sept. 2014 – Jun. 2018

University of British Columbia

Master of Applied Science in Electrical and Computer Engineering Sept. 2018 - May 2020 (Expected)

Supervisor: [Karthik Pattabiraman](#)

Research interest: Fault tolerance, security and privacy of machine learning

Research Experience

Reliability of Machine Learning Systems

Graduate Research

Understanding the error resilience of ML systems

Presented in SC'19

- *Research question:* How to precisely identify the critical bits in ML systems due to hardware transient faults (i.e., bit-flip), to guide the design of error-resilient ML systems.
- *Key insight:* We analyze the mathematical properties of common ML systems, and find many of them exhibit monotonicity, which constraints the fault propagation behaviors.
- We design a binary-search like fault injector to identify critical bits in the system.
- *Results:* Our approach can efficiently identify 99%+ of critical bits with 99%+ precision.
- Code: <https://github.com/DependableSystemsLab/TensorFI-BinaryFI>

Enabling error-resilient ML systems

Manuscript in prepreation

- *Research question:* How to enhance the error resilience of ML systems leveraging the unique characteristics of critical faults in ML systems.
- *Key insight:* We selectively apply range restriction on certain ML computations in the models, to limit the fault amplification, thus preventing the faults leading to erroneous outputs.
- Our approach can be integrated into existing model without retraining.
- *Results:* Our approach enabled *significant resilience boosting* and *would not* degrade the accuracy of the model.

Wearable Computing Security

Undergraduate Research

- Lightweight and real-time key establishment scheme for wearable embedded devices.
 - Sensing user real-time motion to secure communication between on-body devices.
 - Leveraging the inherent randomness of the sensory data as a secret for secure key generation.
-
